# CSS Worksafe Height Safety Systems

TEL: 0800 783 0757

FAX: 01527 873 262

Dear Reader,

Working at height is generally considered to be a risky occupation. The Health & Safety Executive (HSE 2003) report that in year 2001/2 74 fatal accidents were caused as a result of falling from height, with 5286 workers being seriously injured.

Safety measures are often perceived as a barrier to completing a task quickly with any job inevitably involving a trade-off between safety and expediency.

CSS WORKSAFE are one of the leading companies in the UK supplying specialist Height Safety Equipment, Training and Consultancy. Over the last two years we have worked closely with the Health & Safety Executive and Confederation of Aerial Industries to provide a safe system of work at height for aerial and satellite dish installers that maintains the balance between speed and safe practice.

This safe system of work has been accepted by the HSE as 'Best Practice', and can be adopted by a wide range of tradesmen who work from ladders.
